BEMNET MULACHEW ANULO

PROFESSIONAL SUMMARY

Data Analyst:

"I'm a Junior Data Analyst who loves turning messy spreadsheets into clear, actionable dashboards. Through 10 Academy's Kifiya programme, I've built cohort analyses and Power BI reports that helped a local community programme understand their retention drop-offs. I speak fluent SQL and Python, but I'm equally comfortable sitting down with stakeholders to figure out what the numbers actually mean. Looking for a graduate role where I can help a team make data-driven decisions."

TECHNICAL SKILLS

Languages: Python (Pandas, NumPy), SQL (PostgreSQL), R

ML & AI: scikit-learn, PyTorch, HuggingFace Transformers, LangChain

Data & Visualisation: Power BI, Tableau, Excel (Advanced), Streamlit

Databases & Cloud: PostgreSQL, BigQuery, dbt, AWS (S3, EC2 basics)

Tools & Workflow: Docker, Git, Airflow, Linux/Bash

Soft Skills: Clear communication, stakeholder alignment, and the patience to debug for hours without losing my mind.

WORK EXPERIENCE

Data Science Intern (Project-Based) | 10 Academy (Kifiya Programme) | Remote June 2026 – Present

- Reduced false positives on a customer churn model by 22% by re-labelling skewed training data and retuning an XGBoost classifier—which saved the mock retention team 6 hours of manual review time each week.
- Built an end-to-end ETL pipeline that ingests raw CSV data from a fintech case study into PostgreSQL, cutting data prep time from 45 minutes to just 5 minutes per analysis run.
- Presented weekly findings to a panel of mock stakeholders, translating complex model metrics (like ROC-AUC and F1) into simple business recommendations that non-technical team members could act on.

Freelance Data Analyst | [Project] | Addis Ababa, Ethiopia
Jan 2026 – May 2026

- Designed a sales performance dashboard for a local retail client using Power BI, consolidating 3 years of messy Excel records into a single source of truth.
- Identified that 15% of their top-selling products were actually losing money due to hidden logistics costs—prompting the owner to renegotiate supplier contracts and boost net margins by 8% in two months.

EDUCATION

Kifiya AI Mastery Programme (KAIM10) | 10 Academy
2026

- An intensive, employer-recognised 10-week bootcamp focused on real-world Data & AI applications using Ethiopian and Kenyan datasets.
- Collaborated in a cross-functional team of 5 to deliver a working ML product every week—learning Git workflows, code reviews, and agile project management along the way.

Bachelor of Science in Electrical Engineering from Adiss Ababa Science And Technology University , Ethiopia 2021 – 2026

- Relevant coursework: Database Systems, Introduction to AI.
- GPA: 2.84/4.0 .

PROJECTS

Amharic News Classifier | [Python, HuggingFace, Streamlit]

- Scraped 15,000 Amharic news articles from 6 local categories and fine-tuned a multilingual BERT model from scratch. Achieved 89% test accuracy—which beat the baseline logistic regression model by over 20%.
- Containerised the app using Docker and deployed it on a free Streamlit cloud instance so anyone can test it.

Customer Churn Predictor for Fintech | [Python, scikit-learn, PostgreSQL]

- Built a binary classification model to predict which customers were likely to churn in the next 30 days, using 6 months of transactional data.
- Engineered 12 new features from raw timestamps and transaction histories, boosting model recall from 72% to 84% —catching more potential churners before they left.
- Wrote a detailed README explaining the data leakage pitfalls I avoided, so employers know I understand ML hygiene.

CERTIFICATIONS

Google Data Analytics Professional Certificate | Google / Coursera

Earned: March 2026
